

Kaspersky Small Office Security – Help me decide.

How do I know if Kaspersky Small Office Security is right for my business?

It's easy! Kaspersky Small Office Security was designed for businesses with up to 10 PCs and up to 2 servers. The unique feature of Kaspersky Small Office Security is that you can easily control the office's PC and server security from one location: adjust anti-malware settings; run scans, updates and backup tasks; fix security issues; remotely manage employees' access to the Internet; and update security licenses. You can also run reports on infections and protection status.

Can Kaspersky Small Office Security save me money?

Yes it can. Not only does Kaspersky Small Office Security offer superior protection against data breaches and hacker attacks aimed at stealing your money, you also benefit from the centralized management tools – no more running from desk to desk to install updates or to make sure everyone is backing up. You can also set and lock down policies such as enforcing regular scans. Ensure your employees are more productive by limiting their web access to sites and setting controls as to when they can surf – not on your time! Kaspersky Small Office Security can help you run a more efficient and profitable business.

I need to customize how I buy Kaspersky Small Office Security for my business.

Go for it! Kaspersky Small Office Security is sold in the following packs in 1 and 2 year terms:

- 5 PC pack
- 10 PC pack
- 5 PC, 1 server pack
- 10 PC, 1 server pack

While it is possible to manage more than 10 PCs and 2 Servers with Kaspersky Small Office Security, it is recommended that you upgrade to Kaspersky Open Space Security which is optimized for larger organizations.

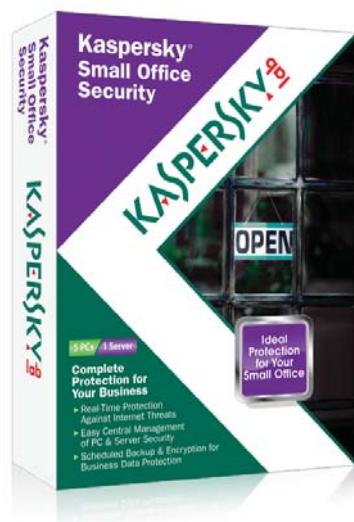

Can I just use the same anti-virus / anti-malware that I use on my home PC?

We don't recommend it. While the level of protection you might get from your home security product may be comparable, Kaspersky Small Office Security allows you to manage the protection of your entire office from your PC. You can set policies for your users and lock them down so only you can change them. As the administrator, you can run scans, install updates and fix security issues. Also, Kaspersky Small Office Security comes packed with other powerful business tools like encrypted data vaults, password manager, file shredder, automatic backup and the ability to remotely manage your employees' access to the Internet. These are things that home anti-malware solutions are not designed for and are designed to improve not just the security – but the bottom line for your small business.

Is Kaspersky Small Office Security difficult to install?

Not at all. Kaspersky Small Office Security is packed with simple-to-use wizards to help even the most non-technical person install with ease. Wizards help to remove the existing anti-malware product, set policies, design custom settings and deploy to multiple users at once. Also, Kaspersky offers free technical support to walk you through any area of the installation.

(Continued)

Kaspersky Small Office Security delivers everything you need to protect your business, plus a unique control center that makes it easy. From one PC, you can run scans, reports, updates and backups; and remotely manage your employees' Internet access. Stay focused on your business knowing that with Kaspersky you're safe.

Can Kaspersky Small Office Security protect my small network from hackers?

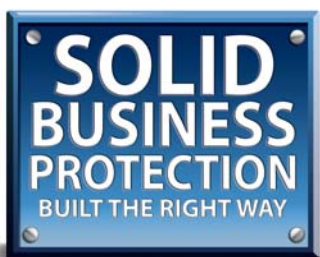

Absolutely! Kaspersky's two-way firewall provides a secure perimeter around your systems to keep hackers out. But it also provides protection in the opposite direction by controlling what's transmitted from your systems to the outside world, stopping malware from sending out your sensitive data. It's one more layer of defense keeping your business and customer data from falling into the wrong hands.

What if something goes wrong? Who can help me?

No need to worry. In addition to our strong network of software resellers in your area, Kaspersky offers free technical support by phone, live chat or email. Free phone support is offered from 8:00 am EST to 9:00 PM PST in English, Spanish, Portuguese and French. Our support department is located in the United States and over 90% of all issues are resolved by the engineer on the first call! Quality support equals lower costs for you.
